Re: ENGR Courses

We are reactivating the ENGR courses because of the approval of a Strong Workforce proposal. The proposal gives us the funding to hire an engineering instructor to teach classes starting in the Fall 2020 semester. Currently the only path for our engineering students at MJC is to complete a physics or mathematics degree and then transfer to a nearby community college to finish their engineering requirements. Reactivating the engineering curriculum will allow students to complete degrees at MJC and transfer directly to a CSU or UC without having to complete numerous lower division requirements. With our expanding physics enrollments, we have an immediate need to offer engineering courses to satisfy the demands of our students. We have had students try to get into certain institutions as an engineering student, only to be denied because of our lack of engineering courses. The courses we are activating fulfill many of the lower division requirements for mechanical and electrical engineering.
